Getting the Setup List

The screenshot displays the Focus List software interface. The main window is titled "Focus List" and shows a "Keltner Longs" scan setup. The "Data Source" is set to "OmniScan". The "Starting Population" is "All Optionable U.S. Stocks" with a count of 3,156. The "Criteria Rules" section shows the following rules:

Rules	Symbol	Count
$C > 0$ and $C > 5$	Current	801
$L[1] < KLTC_LOWER(12,14,1.3)$	Current	245
$C > KLTC_LOWER(12,14,1.3)$	Current	145
$Avg(V,20) * Avg(C,20) > 20000000$	Current	52

The "Sort Value" section shows the formula: $AVG(C, 10) * AVG(V, 10)$. The "Select top" is set to 200 stocks, and the "Sort" is set to Descending. The "Criteria Rules" section also includes a table of rules and their counts, and a "Sort Value" section with a formula and buttons for "Fund", "Tech", "Reset", "Clear", and "Apply".

- Apply Keltner Crossover Scan across the entire market in OmniScan!
